Reducing the Impact of Pharmaceutical Marketing to Physicians and Promoting Appropriate Prescribing and Drug Safety

The pharmaceutical industry spends nearly $30 billion annually on marketing. The majority (including samples) is spent on direct marketing to physicians (Donohue, NEJM, 2007).

Nationwide, prescription drug spending rose 500% (from $40.3 billion to $200.7 billion) between 2000 and 2005 (Kaiser Family Foundation, 2007).

The Pew Prescription Project leads a national coalition advocating for policies that ensure safe and effective use of drugs. NCAP calls for greater transparency in the relationship between medicine and pharmaceutical and medical device marketing including passage of a strong Physician Payments Sunshine transparency legislation. The Coalition also supports the creation of a national physician education “academic detailing” program.
