Video Companion: Frequently Asked Questions

Adolescents and young adults are in a critical window of vulnerability to substance misuse and addiction. Early access to verbal or written screening and counseling is a cost-effective way to help young people avoid the destructive consequences of drug and alcohol problems. Too often, the adults young people trust most are reluctant to begin the conversation about substance use.

This video features young people and advocates talking about the promise of screening, brief intervention and referral to treatment (SBIRT) for changing lives by promoting honest conversations with adults that help identify problematic alcohol and drug use early and guide follow-up counseling and treatment.

Frequently Asked Questions about SBIRT:

Understanding the SBIRT Approach

How exactly does SBIRT work?

How is the screening conducted?

What does the brief intervention involve?

Preparing to Implement

How can providers access SBIRT training?

If we start screening young people, should we expect a lot of referrals?

How do you handle confidentiality when screening young people for substance use?

Support for SBIRT

Who’s using SBIRT around the country?

Is there research supporting youth SBIRT?

Who has endorsed SBIRT with youth?

Get Involved in State Advocacy

How did Massachusetts establish a statewide mandate for SBIRT in schools?

How can I bring SBIRT to youth in my community?

Understanding the SBIRT Approach

How exactly does SBIRT work?

SBIRT (screening, brief intervention, and referral to treatment) involves asking young people a few questions about drug and alcohol use and providing guidance or referring them to treatment if a problem exists.

How is the screening conducted?

Young people are asked about drug or alcohol use through a verbal, written or online tool. There are several evidence-based screening tools for young people designed to detect current and future problematic drug or alcohol use. Examples of screening tools suitable for young people include: CRAFFT, Alcohol Use Disorders Identification Test (AUDIT) and Screening to Brief Intervention (S2BI).
What does the brief intervention involve?

Brief interventions are structured conversations with licensed health professionals, paraprofessionals (e.g., health educators) or peers who are trained in brief intervention techniques. The intervention is age-appropriate and tailored to the level of drug or alcohol use indicated by the young person. For example:

- No use: Positive reinforcement for abstaining from drug and alcohol use.
- Minimal and infrequent use: Brief advice to advise against future use.
- Risky or severe use: Brief intervention or brief treatment using motivational interviewing or other approaches that elicit a young person’s desire to change using a non-judgmental, empathic approach. The brief intervention may be followed by a referral and warm hand-off to a behavioral health treatment provider.
Preparing to Implement

How can providers access SBIRT training?

This toolkit is a great starting point when considering implementing SBIRT. There are also many in-person and online training resources available.

If we start screening young people, should we expect a lot of referrals?

Based on national statistics and data from SBIRT pilot projects, it is likely that only a small percentage of young people screened will need a referral to treatment. Data from a school SBIRT pilot showed only 5% of students screened required a referral to treatment. In a study of drug and alcohol screening in multiple adolescent primary care settings, an average of 18% needed brief intervention and 3% needed a referral to treatment.

Massachusetts School SBIRT Pilot:

How do you handle confidentiality when screening young people for substance use?

In most cases, the screening results and conversations will remain confidential unless the risk of harm to the young person or others is a concern. The individual conducting the screening should follow best practices for protecting the privacy of young people who may disclose drug or alcohol use. If the screening is occurring in a school or health care setting, there are already protections in place governing the confidentiality of medical records.
Support for SBIRT

Who’s using SBIRT around the country?

SBIRT is currently used with young people in a wide variety of settings. Here are a few examples:

- Schools: Several states are using SBIRT in public middle and high schools, including Massachusetts and Wisconsin.
- School-based health centers: New Mexico and New York have implemented successful SBIRT initiatives in school-based health centers.
- Community health centers: New Hampshire Screen & Intervene
- Juvenile justice programs: Reclaiming Futures SBIRT Initiative

Is there research supporting youth SBIRT?

From childhood into young adulthood, screening and counseling are well-established best practices for helping young people to avoid alcohol and drug use and choose healthy paths. To briefly summarize the research:

- Screening through questionnaire is a key step in preventing young people from misusing drugs and alcohol. Studies show simply asking young people about drugs and alcohol can lead to positive behavior changes.3 4
- In young people, brief interventions reduce alcohol misuse. Young people respond to brief counseling by drinking less often and reducing the number of drinks consumed at one time.5 Brief interventions also ease alcohol-related consequences, like skipping school or fighting with friends or family because of alcohol.6
- Brief interventions can help curb drug use among young people. Recent studies show brief interventions delivered in a primary care office,7 emergency department,8 or a school setting9 reduce marijuana use among adolescents.

Who has endorsed SBIRT with youth?

Screening and brief intervention for young people is recommended by:

- American Academy of Family Physicians (AAFP)
- American Academy of Pediatrics (AAP)
- American Medical Association (AMA)
- Centers for Disease Control and Prevention (CDC)
- National Institute on Drug Abuse (NIDA)

Get Involved in State Advocacy

How did Massachusetts establish a statewide mandate for SBIRT in schools?

Massachusetts is the first state in the nation to require all schools to verbally screen middle and high school students for drug and alcohol problems. The Massachusetts law requires school nurses to screen all students in two grades using a validated questionnaire and follow-up.

Advocates with the Children’s Mental Health Campaign at the Massachusetts Society for the Prevention of Cruelty to Children (MSPCC) worked with law makers and key stakeholders (school districts, school nurses, parents, youth) to launch a statewide advocacy campaign to establish this mandate. This project was part of a nationwide initiative to expand the use of SBIRT with youth.

How can I bring SBIRT to youth in my community?

You can connect with consumer health and recovery advocates across the country who are leading statewide policy campaigns to make sure young people have access to screening and early intervention. Here is a list of key state policy initiatives:
